EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John A. Miller on June 15, 2007.

The application has been amended as follows:

In claim 4, line 3, "estimator signal" has been changed to "estimator signal from said average level estimator".

In claim 15, line 4, "two mark symbols or two space signals" has been changed to "or two symbols".

In claim 16, line 9, the word "include" has been changed to "includes".

In claim 17, line 4, "received signal" has been changed to "receiver signal".

In claim 19, line 4, "selector switch" has been changed to "select switch".

In claim 19, lines 6-7, "two mark symbols or two space symbols" has been changed to "or two symbols from the threshold test circuit".

In claim 26, lines 4-5, "output of zero, one, two mark symbols or two space symbols" has been changed to "the output of zero, one, or two symbols".

In claim 27, lines 9-10, "said antipodal circuit including" has been changed to "wherein said antipodal circuit includes".

In claim 28, lines 2-3, "signal and said receiver signal generates" has been changed to "signal from said average level estimator and said receiver signal to generate".

In claim 39, lines 3-4, "two mark symbols or two space symbols" has been changed to "or two symbols".

2. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: In Fig. 4, block element 50, the word "adjudication" is misspelled as indicated in the last Office Action. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

3. The following is an examiner's statement of reasons for allowance: the prior art fails to show or suggest that a maximum likelihood bit synchronizer comprises at least n timing hypothesis circuits coupled to a tapped delay line, wherein n is an integer equal to a second rate sampled by a receiver divided by a first rate generated by a transmitter plus two, wherein each of the n timing hypothesis circuits includes a sum-and-dump summer connected to $n-2$ outputs of the tapped delay line; and a control and adjudication circuit coupled to the n timing hypothesis circuits that compares outputs of the n timing hypothesis circuits and selects one of the n timing hypothesis circuits. Or a maximum likelihood bit synchronizer comprises at least a plurality of timing hypothesis circuits coupled to a tapped delay line, wherein each of the timing hypothesis circuits includes a data detector, an absolute value circuit connected to a data detector, and an averaging circuit connected to an absolute value circuit; and a control and adjudication circuit coupled to the timing hypothesis circuits that compares outputs of the timing

hypothesis circuits and selects one of the timing hypothesis circuits. Or a maximum likelihood bit synchronizer comprises at least n timing hypothesis circuits coupled to a tapped delay line, wherein n is an integer equal to a second rate sampled by a receiver divided by a first rate generated by a transmitter plus two; an antipodal circuit coupled to an input of the tapped delay line for generating an antipodal signal from a receiver signal, wherein the antipodal circuit includes an average level estimator; and a control and adjudication circuit coupled to the n timing hypothesis circuits that compares outputs of the n timing hypothesis circuits and selects one of the n timing hypothesis circuits.

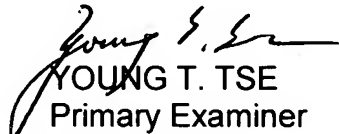

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
